Audiometry - Wideband Reflectance (P_AUXWBR)

Data File: P_AUXWBR.xpt

First Published: March 2022

Last Revised: NA

Component Description

The NHANES program suspended field operations in March 2020 due to the coronavirus disease 2019 (COVID-19) pandemic. As a result, data collection for the NHANES 2019-2020 cycle was not completed and the collected data are not nationally representative. Therefore, data collected from 2019 to March 2020 were combined with data from the NHANES 2017-2018 cycle to form a nationally representative sample of NHANES 2017-March 2020 pre-pandemic data. These data are available to the public. Please refer to the Analytic Notes section for more details on the use of the data.

The audiometry exam component includes one main audiometry data file (P_AUX) and three middle ear testing data files. This wideband reflectance data file (P_AUXWBR) is one of three middle ear testing to evaluate the functional health of the middle ear system. The wideband reflectance measures the transmission of sound through the eardrum across a range of frequencies while ear canal pressure remains constant. The propose of the present data file is to provide the underlying raw data curves for this set of wideband reflectance, which will allow analysts to display actual wideband absorbance curves, make qualitative judgments regarding test adequacy and interpretation, and to perform quantitative analyses.

Eligible Sample

All participants aged 6–19 years and 70 years and older in the NHANES 2017-March 2020 pre-pandemic sample were eligible. There were no precluding conditions for any part of the audiologic exam. However, participants using hearing aids who were not able to remove them for testing and participants who had sufficient ear pain at the time of the exam that they could not tolerate headphones were excluded.

Protocol and Procedure

An Interacoustics Titan (middle ear analyzer) was used to conduct three middle ear tests: tympanometry, wideband reflectance, and acoustic reflex threshold screening. Wideband reflectance measures the movement of the eardrum in terms of how much sound is transferred through the middle ear system across a range of frequencies at a single pressure (ambient air pressure – usually 0 daPa). Trained examiners performed the middle ear testing on survey participants in a sound-isolating room in the NHANES mobile examination center (MEC). The wideband reflectance testing produced an electronic output. The single best curve for each ear obtained during the testing was captured and uploaded for data processing. Please refer to the [NHANES Audiometry Procedures Manual](#) for further information on the middle ear testing

Quality Assurance & Quality Control

The physical volume calibration of the Titan was checked daily throughout testing and at the start and end of each survey location. In addition, the MEC health technicians ran a sample test on one ear to ensure that the unit is producing clear, normal graphs. The Titan also received an exhaustive National Institute of Standards and Technology traceable calibration check annually.

The MEC health technicians who performed the wideband reflectance testing were professionally trained by

a certified audiologist from the National Institute for Occupational Safety & Health (NIOSH). The NIOSH audiologist monitored the performance of each health technician on a regular basis and visited the MEC at least three times per year. Additionally, NCHS project officers visited each MEC to observe the audiometry examinations and verify that standard testing procedures were being followed. NIOSH consultants provided the MEC health technicians with annual retraining and protocol updates.

Data Processing and Editing

The wideband reflectance testing collected three array data (frequency array WBXF0001-WBXF107, absorbance array WBXA001-WBXA107, and phase array WBXP001-WBXP107) for each ear (WBXFEAR 1=right ear 2=left ear). All data were automatically captured and uploaded into the NHANES computerized database system. On a continuous basis, a consulting audiologist performed a clinical review of all data for each subject as it was received, checking for quality and consistency. Absorbance array data point values outside the expected range of 0 to 1 represent some sort of artifact in the wideband absorbance recording or the presence of an additional sound in the ear canal (for example, an otoacoustic emission). The P_AUXWBR data file represents the raw data as it was collected.

The P_AUXWBR data format and variables are the same as the 2017-2018 data (AUXWBR_J). Most participants have two records (one for the right ear and one for the left ear). Some participants have only one record (either one of the ears). Eligible participants who did not have wideband reflectance data on both ears are excluded from this data. The final P_AUXWBR data file contains 9,234 observations and 323 variables.

Analytic Notes

The COVID-19 pandemic required suspension of NHANES 2019-2020 field operations in March 2020 after data were collected in 18 of the 30 survey locations in the 2019-2020 sample. Because the collected data from 18 locations were not nationally representative, these data were combined with data from the previous cycle (2017-2018) to create a 2017-March 2020 pre-pandemic data file. The resulting exam sample weights in the demographic file should be used to calculate estimates from the combined cycles. These exam sample weights are not appropriate for independent analyses of the 2019-2020 data and will not yield nationally representative results for either the 2017-2018 data alone or the 2019-March 2020 data alone. Please refer to the NHANES website for additional information for the NHANES 2017-March 2020 pre-pandemic data, and for the previous 2017-2018 public use data file with specific weights for that 2-year cycle.

Static wideband reflectance testing results in a series of 107 x-y-z coordinates that measures sound absorbance and phase as a function of frequency when the pressure in the ear canal is held constantly (at atmospheric pressure – usually 0 daPa). Results may be plotted two dimensionally with frequency (in Hz) along the x-axis and absorbance (in percent of sound energy) or phase (in degrees) along the y-axis. The absorbance-by-frequency graph summarizes the efficiency of sound transmission through the middle ear system across the audiometry frequency range. The phase-by-frequency graph identified resonant frequencies within the middle ear system (i.e., where phase approaches zero). Most participants have two curves: one for the right ear and one for the left ear. Some participants have only one curve: either right ear or left ear. Eligible participants who did not have a wideband reflectance test on both ears are excluded from this data file.

The Titan measures absorbance and phase at discrete frequency interval during wideband reflectance testing. Therefore, although absorbance and phase measurements will vary for each measurement, the frequency values will always be the same. The frequency measurement is range from 226 to 8000 Hz. Absorbance values range from 0 to 1 and are typically converted to percentage when plotting. Values above or below this range may represent an artifact in the recording or indicate the presence of a physiological sound generated in the ear canal (such as an otoacoustic emission). Phase values range from -180 to +180. Please refer to the NHANES Analytic Guidelines and the online NHANES Tutorial for further details on the use of sample weights and other analytic issues.

SAS Label: Frequency Array Data Point 095
English Text: Frequency Array Data Point 095
Target: Both males and females 6 YEARS - 19 YEARS
Target: Both males and females 70 YEARS - 150 YEARS

Code or Value	Value Description	Count	Cumulative	Skip to Item
5656.8542 to 5656.8542	Range of Values	9234	9234	
.	Missing	0	9234	

WBXF096 - Frequency Array Data Point 096

Variable Name: WBXF096
SAS Label: Frequency Array Data Point 096
English Text: Frequency Array Data Point 096
Target: Both males and females 6 YEARS - 19 YEARS
Target: Both males and females 70 YEARS - 150 YEARS

Code or Value	Value Description	Count	Cumulative	Skip to Item
5822.6127 to 5822.6127	Range of Values	9234	9234	
.	Missing	0	9234	

WBXF097 - Frequency Array Data Point 097

Variable Name: WBXF097
SAS Label: Frequency Array Data Point 097
